

PROCUREMENT TENDER / TECHNICAL SPECIFICATION

Government Infrastructure Project – Supply of Structural Steel for a Road Bridge

Tender Reference: DEMO/BRIDGE/STEEL/2026/014

Procuring Authority: Department of Public Works – Demonstration Tender

Project: Construction of a two-lane public road bridge and approach works.

1. Scope of Procurement

The authority intends to procure structural steel and reinforcement-related steel products for a public road bridge. Supplied materials shall comply with applicable Indian Standards and be accompanied by inspection and test documentation.

2. Material Requirement

Item	Requirement
Structural steel	Hot-rolled structural steel plates, sections and flats for bridge components
Grade	High-tensile structural steel suitable for welded construction; grade to be proposed by bidder
Reinforcement	High-strength deformed steel bars for reinforced concrete components
Surface	Free from harmful defects, excessive rust, cracks, laminations and other detrimental imperfections
Welding	Welded fabrication shall follow applicable requirements for carbon/manganese steels
Quantity	Approximately 180 metric tonnes structural steel; final quantity as per approved drawings

3. Technical and Performance Requirements

- Steel shall possess the specified yield strength, tensile strength, elongation and other mechanical properties required for the proposed grade.
- Chemical composition shall be within the limits applicable to the selected steel grade.
- Dimensions, mass and tolerances shall conform to the applicable product specification.
- For reinforcement bars, rib geometry and mechanical properties shall satisfy the applicable Indian Standard requirements.
- Materials shall be suitable for fabrication, bolting and/or welding as specified in approved drawings.
- Manufacturer test certificates and batch/heat identification shall be provided for traceability.

4. Inspection, Testing and Quality Assurance

- Chemical analysis and mechanical testing shall be carried out as applicable to the supplied product and grade.
- Tests shall be performed at an accredited/competent laboratory where required by the contract.
- The purchaser may inspect material, review test certificates and conduct or witness sampling/testing.
- Non-conforming material may be rejected according to contract conditions.

5. Standards / Compliance Clause

The bidder shall identify and comply with applicable current Indian Standards for structural steel, structural steel design, reinforcement steel, loads and relevant welding/fabrication requirements. Where a standard has been amended or superseded, the applicable current version shall be used unless the contract explicitly specifies otherwise.

6. Bidder Submission

- Technical datasheets and proposed steel grade(s).
- Manufacturer test certificates and heat/batch traceability.
- Applicable Indian Standards and conformity evidence.
- Inspection and testing plan.
- Proposed manufacturer and quality-control details.

DEMO NOTE: This is a synthetic tender created only for testing the PRAMAN prototype. It is not an actual government tender.
